Homemade Booby Traps: Tricky But Simple Traps That Protect Your Property From Robbers

Creating booby traps may seem like something that you do as a child but they are an excellent way of protecting your home and even capturing food while you are in the wild. Booby traps come in all shapes and sizes. Perhaps the greatest part is that you can always tinker with the set up and create your own booby traps. You can mix and match the ones in this guide or even create a completely new one. This guide is designed to introduce you to the world of booby traps and illustrate how easily you can create them. You have the right to defend yourself, your family and your home; but the amount of force you use must be reasonable. It is therefore important to consider which of these booby traps is suitable for your needs; depending on the situation in hand. The guide will show you:

- Why booby traps are essential in the modern world.
- Beginner booby traps for your yard that will warn you of an intruder's presence.
- Booby traps for outside that can deter or injure a would be attacker; persuading them not to continue with their quest.
- Booby traps to set up inside your home to continue the warning, deterrence and even fatally injure the intruder.
